postoperative HUS. The authors report this complication for the first time after tonsillectomy and adenoidectomy, and recommend that the diagnosis be entertained in the differential diagnosis of a child with the signs of HUS, and that all patients undergoing

adenoidectomy be closely monitored for the development of signs of HUS.KANDAHAR, Afghanistan — Afghan officials and militia leaders are racing to secure a military base before a Sunday deadline as the Taliban again step up their offensive in a major prelude to next week's

national election. With a particularly vicious attack Sunday morning, militants targeted a large contingent of security forces in Kandahar province — striking one vehicle as it was returning to the base from an election-related event. It was not immediately clear

how many people were killed or injured in the attack, which was quickly blamed on the Taliban. The strike was the latest in a series of attacks across the country, many of which have been claimed by the Taliban. They are an ominous sign for Afghanistan's September 28

presidential election, which is just 11 days away. The Taliban has said it plans to contest the polls and has vowed to disrupt the election. The latest violence follows the recent announcement that the Taliban will again join the political process. The declaration is at

odds with its long-standing refusal to negotiate with the government, which it views as a U.S. puppet
