After the download is complete, click Run to run the application. The app will launch and open your Autodesk Autocad application. The popular eSports league that just announced an expansion into the United States has done so to capture a massive new audience, and help maintain the current one. Electronic Arts, the company that owns the FIFA franchise, has partnered with ESL to open a division that will be focused on producing collegiate eSports. "The partnership with ESL will help create a great eSports ecosystem in North America, allowing for the entire community to be able to play, compete and win," EA Sports vice president of gaming Scott Ballenger said in a release. The first season of collegiate gaming will begin later this month with the Collegiate Starleague, a league made up of more than 30 universities across the country. The league's first competition will see Michigan State and Texas A&M duke it out for the right to call itself "MSU Aggies." A new season of the Starleague will be added to the schedule every three weeks throughout the semester, with a final championship season held in April. As competition grows, so will the viewing audience. "We believe that this new partnership will give eSports a platform where universities can become destinations for their alumni and future students and expand eSports to a new audience in North America," ESL CEO Ralf Reichert said in a statement. "As the popularity of eSports continues to grow, ESL plans to provide the definitive platform for pro gamers, broadcast partners and communities to thrive, both on and off-screen." Reichert noted that professional leagues such as the NBA, NFL and MLB have developed successful platforms, and that it's only a matter of time before those same principles are applied to the burgeoning world of eSports. "There's no doubt that big sports-style leagues are coming," Reichert said. "With the NBA's acquisition of the Sacramento Kings in 2014, the NHL's move into Toronto and expansion into Las Vegas, and more on the horizon, the eSports world can only benefit from the expertise and success of traditional sports franchises."
