KeyMacro is an application that promises to decrypt and restore your Protected XML files. Besides allowing you to decrypt and recover the original XML files, the utility also gives you the possibility to encrypt the files so that the sensitive data is safe. Price: KeyMacro costs \$0.00 (Free) to use for ten days, but it does not come with any refund policy. Nevertheless, the software offers a 30-day money-back guarantee, so there's no risk in trying it out for yourself. Installer and interface The interface is minimalistic and well-organized. KeyMacro's interface has two tabs where you can add the XML files to be decrypted. Both files and folders can be added to the destination folder, and you can also specify the name of the backup file. KeyMacro has an embedded, clean, and intuitive user interface. A toolbox pops up with all the necessary tools when the application is started. It's easy to select and copy the encrypted XML file, and then drag and drop it into the decryptor. You can also choose between an XML file or a folder, and you can add the input and output file names as a destination folder. The tool also allows you to preview the decrypted file before moving the original one to the output folder. The preview tool includes the original file, the decrypted one, and the encrypted file. If you're satisfied with the results, you can select the encrypted file and drag and drop it onto the output folder. The interface is not very advanced, so it might be difficult to use if you're unfamiliar with the XML format or Protected XML files. Neat tool for decrypting Protected XML files It is not clear whether KeyMacro decrypts Protected XML files automatically or if you have to explicitly specify this option. Moreover, the tool's help contains no information on this subject, but the software does decrypt protected files by default. The decryption works on all Protected XML files that KeyMacro is installed on, and it promises to preserve the original layout and formatting. When using KeyMacro to decrypt a protected XML file, you can preview the original file in both the default and the decrypted states. There's also a button to decrypt the original file, so you don't have to type in the decryption code manually. There's also a button to generate a backup file, but this is only used for preserving your data in case the original file gets damaged or corrupted 1d6a3396d6
