AutoCAD started as a replacement for draftsmen's hand-held drafting instruments. An automatic plotting algorithm, AutoLISP, is capable of processing drawings with embedded data. The program interface can be customized to make it highly suitable for a wide variety of drafting situations. A personal drawing database allows users to save their drawing templates as standard files. Templates can also be created from scratch with the ability to change the template style from scratch. This enables the user to rapidly produce multiple variations of drawings with the same style of lines, text, colors, etc. The "Smart Database" allows users to maintain a database of their drawings in one convenient location, and allows them to have all their drawings as standard templates on one computer. AutoCAD has been noted for being able to simultaneously open many files of different types (for example, drawings, engineering schematics, and mathematical/flow formulas). The user interface has a similar look and feel to Microsoft Word, making it highly familiar to users. A wide variety of features are available, including the ability to: draw line, polyline, arc, spline, and text objects; use points, polylines, circles, and arcs; draw, annotate, and dimension, in addition to 2D and 3D modeling; work on paper, in a template, or on an electronic drawing board; and maintain and edit data in form files and files embedded in drawings. AutoCAD is a comprehensive 2D and 3D drafting and design application, and has become one of the most widely used CAD programs in the world. Its "auto" functionality, which is intended to make the user's life easier by automatically placing objects in the proper location, working as though by magic, and remembering the position and angle of objects that are moved or deleted, is what makes AutoCAD the most popular CAD program. The trademark "AutoCAD" is licensed and trademarked by Autodesk. Features [edit] Features of the AutoCAD 2D/3D Modeling [edit] Features of the AutoCAD 2D/3D Modeling The AutoCAD 2D and 3D modeling features are the most highly demanded features of any CAD program. Once these features are available to a user, they become an inseparable part of the user's drafting process. AutoCAD is the first CAD application to incorporate these features and

The \$1.6 billion mine project was given the green light by the state's environment department in 2015. HALF A CENTURY AFTER A FORMER mining magnate's legacy was bulldozed, and the mining tax is a distant memory, the prime minister says the time has come for the state to honour its end of the deal with then Labor premier Kim Beazley. The state's Liberal leader Steven Marshall said yesterday's decision was the right one, despite the fact that Labor MPs Tom Koutsantonis and Stirling Hinchliffe voted against it and Nationals MP Andrew Fraser supported the decision. Mr Marshall, speaking at an open event at the Liberal Party's state conference in Sydney yesterday, said the miner's legacy should never have been allowed to disappear. Mr Fraser, whose south-west Sydney electorate contains the site, called on the government to commit to the project and release the funds to build the mine. "The people of New South Wales must not have a lost generation of miners," Mr Fraser said. The director of community engagement at EnviroMission Australia, Patrick Lobb, said the decision was a turning point in the history of western Sydney. "This is ca3bfb1094

Feasibility of image-guided irradiation for malignant otitis externa. Malignant otitis externa is an infection of the external auditory canal that may result in destructive ossification of the mastoid and facial nerve involvement. It is a rare disease and its optimum treatment is controversial. This study was designed to evaluate the efficacy of image-guided radiotherapy (IGRT) for the management of malignant otitis externa. From January 2007 to January 2008, 8 patients with malignant otitis externa were treated with IGRT and fractionated radiotherapy. Data on age, sex, pathogenic organism, extent of disease, size of lesion and radiotherapy parameters were prospectively collected for analysis. Eight patients (4 males
