Traveller Intermediate B1 Workbook Answer Key 12. The 2B workbook answers b1 intermediate traveler by 2b quest was written with travelers in mind on Travellerâ€™s Quest ProgramÂ .With the current state of the art, data is stored by using some type of solid storage medium, such as a magnetic or optical disk. The current state of the art for both the write and read process is relatively slow and relatively unreliable. For example, accessing a single byte of information on such a medium could take several seconds to a few minutes. It is therefore desirable to use a memory device and/or method that overcomes the current state of the art problems regarding the data access time and data reliability./** ** ** Copyright (C) 2016 The Qt Company Ltd. ** Contact: ** ** This file is part of the QtCore module of the Qt Toolkit. ** ** $QT_BEGIN_LICENSE:LGPL$ ** Commercial License Usage ** Licensees holding valid commercial Qt licenses may use this file in ** accordance with the commercial license agreement provided with the ** Software or, alternatively, in accordance with the terms contained in ** a written agreement between you and The Qt Company. Traveller Intermediate B1 Workbook Answer Key 12.1. Field of the Invention The invention relates to a mobile communication system, and more specifically, to an apparatus and method for a base station to receive a relay transmitted signal from a relay station. 2. Background of the Related Art In general, when a mobile station is in an area where its radio wave may not reach or a special radio wave may not reach, a mobile communication system covers the area by using a relay station, that is, a relay. FIG. 1 is a block diagram of a mobile communication system using a relay station according to the related art. Referring to FIG. 1, a first base station 10 is located in a service area of a mobile communication system, and a relay station 20 is located in a service area of the mobile communication system, a first mobile station 30 is in communication with the first base station 10, and a second mobile station 40 is in communication with the relay station 20. The relay station 20 relays a signal transmitted from the first base station 10 to the second mobile station 40 so as to allow the second mobile station 40 to be in communication with the first base station 10. This relay technology is called "relay" in the mobile communication system. When the first base station 10 transmits a signal to the second mobile station 40 through the relay station 20, the relay station 20 receives the signal and passes it to the second mobile station 40. As shown in FIG. 1, when the relay station 20 transmits the signal to the first base station 10 via the second mobile station 40, the relay station 20 receives the signal from the second mobile station 40, and then transmits the signal to the first base station 10 via the second mobile station 40. However, when the first
