Download Futuremark SystemInfo...Read more at: Methanarchaeum ambivalens methanogenic community in an Australian methanogenic microbial mat. Methanarchaeum ambivalens is a novel methanogen, isolated from granular euryarchaeotal mats in the Heterotrophic Anaerobic Filter (HAF) of a small, thermally stratified, semi-arid Australian pond. Molecular phylogenetic analyses demonstrate that *M. ambivalens* is phylogenetically distinct from other cultured isolates of methanogens, and that the closest relatives are the recently described Haloarchaea spp. The *M. ambivalens* has a versatile metabolic physiology, growing aerobically, anaerobically, and in the presence of H₂ or CO₂ as carbon sources. Growth with CO₂ required three additional energy metabolites: fructose-6-phosphate, ribose-5-phosphate and 6-phosphogluconate. The *M. ambivalens* genome contains a homologue of fumarate reductase, an enzyme essential for the respiratory reduction of fumarate. Starch and other carbohydrates have been detected in the HAF, suggesting that *M. ambivalens* may play a role in the production of acetate from these carbon sources. This is supported by the identification of a gene encoding a starch binding domain within the *M. ambivalens* genome.

Futuremark SystemInfo is a simple to use application designed to run a diagnostic analysis on various processes and hardware on your computer. The tool can be used as a benchmark component with the supported applications to identify the version of

your system and other identity information. Monitor your system and find hardware IDs Futuremark SystemInfo can scan your computer and collect information regarding a series of services, processes and hardware performance. The tool can easily export the result of the scan to an XML file in which you can view the current values for the system version, user, files, storage, memory and motherboard. You can also view several statistics and information on WMI, Setup APIs, power supplies, DirectX, CPU cores, plus single or multi-threaded activities. This diagnostic tool can only offer you the system information, it does not flag errors, trigger alarms, nor does it repair or clean any irregularity. It does, however, offer you a comprehensive overview on the current state of your system. System information and activity logs Once installed, Futuremark SystemInfo creates several components that you can use with various benchmarks. The System Diagnostic tool allows you to collect system data, monitoring information of direct queries. The GUI utility is simple to operate and features several tabs. The Log displays the task being performed and their status, but the actual results of the search are displayed, separately, automatically exported to an XML file, that you can inspect. Advanced searching tools The Advanced tab in Futuremark SystemInfo allows you to filter the categories that you wish to investigate. Thus, you can select any of the parameters in single and multi-threaded activities, which are ADL info, DirectX, CPUID, NVAPI info, respectively CPU, battery, motherboard, monitor, OS or storage data. Moreover, you can run direct queries on the CPU name, vendor, integrated clock, GPU name, if available, as well as details on each of the CPU cores. You can run standard diagnosis searches or find bottlenecks. 10.0 Oct 12, 2012 SystemInfo might seem intimidating at first, and a bit of a mind bender (mostly because it does so much). It's not meant to replace a techsitian; but to give you an understanding of your current system, and possibly troubleshoot it yourself without having to pay a small fortune.
