Melioidosis: clinical presentation and treatment of an emerging global disease. Melioidosis, a disease that is endemic to Southeast Asia, Australia, northern tropical areas of South America and Africa, and increasingly being recognized in the United States, is caused by the Gram-negative bacillus Burkholderia pseudomallei. In its severe, rather than the generally milder, form, which occurs after immunosuppression, mortality approaches 50%. Much of the current understanding of the natural history of this disease is due to the extensive experience of three research groups: Singapore, Australia and Taiwan. The organism is present in soil, and the contact with a variety of sources of the organism including environment, bioterrorism agents, exotic animals, and contaminated water or soil is the presumed route of acquisition of the organism. The organism is a human-restricted pathogen, and its replication can be prevented with antibiotics. Thus, this review will present an overview of the clinical presentation, diagnosis, and treatment of melioidosis in patients with and without predisposing conditions. We will review the recent literature on epidemiology, diagnosis and treatment of this disease and present our personal experience with difficult or fatal cases. For years, amusement parks have provided patrons with rides, such as roller coasters and the like, that are exciting and provide a great deal of fun. Amuse
