A: Intall Vivid workshop ati 12.1,Next open installer Go to x86>next>next>Select full exe install. You also need to have wine installed, that will allow the install to work.

download wine from appdb: Download and installation screen: You can unzip the video driver into desktop.(then run the setup) A: What Vivid worked well for me was (I'm

on 10.2): Go to the system menu and chose Start > Programs > Windows Software > ATI (OpenGL / Red Hat). Click "ATI Catalyst Control Center" and then click "Install Driver". You can also download "AtiCatCC Express" from the same page and install that. The steps for this are

simpler. Q: How to disable the command line I'm writing a program for school in C# and I've been asked to remove the ability for the user to use the command line on the emulator. Is this possible? This is the program I'm writing:

```
using System; namespace SerialTest { class Program { static void Main(string[] args) { Console.WriteLine("Serial number = " + args[0]); Console.WriteLine(" Emulator serial number = " + Console.ReadLine()); while (Console.Read() > 0) {} } }
```

The emulator serial number can be anything that starts with a zero, for example 0810111 will be read from the user. But the thing I'm worried about is it also being typed into the command line or being read by the user in

general. Is there a way to disable the command line so it can't be used? A: No, unless your instructor has specifically told you to do so, you cannot disable the command line. You can hard code it, hide it, or redirect it. If your instructor has told you to hide the command
