A: You're using the 64-bit version. The 64-bit version only supports up to 32-bit files. Don't use 64-bit software to work on 32-bit files. A: The simplest way to recover files is to use your'recovery partition', even if it is a small partition. The only thing you have to do is replace the 'files.old' folder in the 'recovery partition' with the new one. The effect of age and sex on the nitinol stent thrombogenicity. The aim of this study was to measure thrombus formation on the surface of the nitinol self-expanding stent after implantation. Nitinol stents are being used with increasing frequency for the treatment of vascular disease. The stents used most frequently at present are self-expanding (SE), open-cell (OC), and closed-cell (CC). The OC stent is thought to be associated with an

increased risk of thrombosis because of its open surface area and larger surfaceto-volume ratio. Potential differences in thrombogenicity among these different nitinol stents has not yet been evaluated. We used a new in vivo model to evaluate the thrombogenic potential of the SE, CC, and OC nitinol self-expanding stents. Sixteen healthy adult male canines ranging in age from 8 to 18 months and weighing between 20 and 30 kg were included in this study. All animals received the nitinol stents. Stents were introduced into the infrarenal inferior vena cava and opened in the retroperitoneal plane. The thrombogenic potential of each stent was measured at 2-week intervals using an experimental protocol in which each animal was implanted with 1 of the 3 types of nitinol stents along with a sham implantation in which the stent was placed in the vessel, but no intervention was performed. After

2 weeks, the stents were retrieved for evaluation by scanning electron microscopy (SEM) and mapping of the adherent platelets, lymphocytes, and thrombi. A high degree of adhesion of platelets was found on all of the stents studied at the 2-week time point. SEM was used to assess the average cell size of adherent platelets and the average platelet size surrounding each cell. We found that the average platelet sizes around adherent 6d1f23a050
