
Windows 10: Critical Updates KB4035631 And KB4035632 ^HOT^

a brief note on the new features in this patches: 1. nvme (non-volatile memory express) is a new standard for storage devices that provide fast data access and power efficiency, and 2. system restore technology allows you to roll back changes to your pc, or reinstall an earlier version of windows 10.system restore creates an image of your pc the first time you start it, and then stores it as system restore point. system restore keeps your pc in the same working condition. if you mistakenly make a change, you can revert it without having to reinstall windows 10. system restore allows you to restore pc to a previous state. it works by creating an image of your pc, the first time you start system restore, and then stores it as system restore point. if you accidentally make a change, you can revert it without having to reinstall windows 10. to return to the previous system state, restart your computer, and click the system restore button to access the system restore settings window. if you have a setup process that includes updating drivers, you need to update them when you do a system restore. the easiest way to install drivers is to boot from a windows dvd or usb flash drive. you must download the latest drivers when you are updating the system to windows 10, but that is a different situation. 3. how to adjust the internal temperature of windows 10 in order to adjust the internal temperature of windows 10, you need to adjust the internal temperature of the air coolers, and then adjust the internal temperature of the processor. reduce the throttle under the hood. click the start button on the taskbar. select settings. select system. select device manager under notification and action tabs click on the + sign under the device states tab. select fan. adjust the slider to suit your needs. click ok. open the control panel. select hardware and sound. select device manager under hardware and sound. click on the + sign under the device states tab. select power options. click on the + sign under the power plan tab. select change advanced power settings. choose balanced option. click ok. close the power options window. reboot the computer.
